

Badotherm

Badotherm is a leading manufacturer of high quality mechanical process instrumentation. The family-owned company was founded in 1957 in The Netherlands as a production and repair shop for thermometers, The company name was derived from the name BASTiaan DOrdrecht THERMometers

Nowadays Badotherm is a leading European manufacturer and striving to be the No.1 brand name in the world for high quality process instrumentation and solutions, enabling the customers to optimize their process efficiency and reliability.

Our core product groups are: chemical or remote seals, pressure gauges, differential pressure gauges, thermometers, thermowells, valves, and manifolds. Badotherm offers products and solutions for a wide range of industries e.g. chemical, petrochemical, food and beverage, pharmaceutical and oil & gas, both on and offshore. Badotherm's customers are predominantly international companies with operations all over the world. Since the foundation of the company, the excellent service and support for many Dutch multinationals laid the fundamentals for global expansion. Many customers require the same constant high quality products and support all over the world. Meeting this requirement, regional and local presence was and still is considered the key to success. The Badotherm regional centers, continue to be the solid base that underpins and supports our global network; with headquarters in the Netherlands, production facilities in the Netherlands, Romania and India, and service facilities in the United Kingdom, Thailand, Dubai and the USA.

Improvements in Badotherm product offering

Badotherm are continuing to follow the strategy to "become the preferred global manufacturer of high quality process instrumentation and solutions". Consequently over recent years we have achieved a significant increase in our business to the targeted industries: chemical, petrochemical, pharmaceutical, food industry, and other heavy engineering markets. They satisfactorily use our higher quality products: chemical seals, stainless steel pressure and temperature gauges, thermowells, and manifolds.

In order to focus our resources on this strategy and improve our performance even more, Badotherm has decided to stop the production of brass pressure and temperature gauges and auxiliary brass products.

With this a dedicated focus on our core products it is our objective to further improve our efficiency, service and support to you, our valued customers

Products

Badotherm offers a full range of products to measure pressure, temperature and level. All of our products are designed and manufactured under our supervision in Badotherm facilities worldwide. This is far more complex than it seems. Manufacturing a perfect product starts with its design. Not only does Badotherm design the end

product, and all its components, the necessary tooling and machinery are designed in house too.

Pressure instruments

Badotherm's full range of mechanical pressure instruments to accurately measure your process conditions.

Temperature instruments

Badotherm's range of gas filled and bimetallic temperature instruments range from a minimum of -200 °C up to a maximum of 650 °C.

Chemical seals

Badotherm's flexible and extensive chemical seal range with a wide choice of system fill fluids and diaphragm materials,

Manifolds

Badotherm's manifold range includes basic one-way needle valves, straight or angle type, up to 3, 4, and 5-valve manifolds.

Level gauges

The complete range of level instruments encompasses tubular level gauges; reflex and transparent level gauges, and magnetic level gauges.

Additional devices

Badotherm offers a limited specialised product range for the automotive industry.
